Establishes the following:

Art. 1 - Scope
1. A public selection is announced to award 1 research fellowship/s lasting 12 months, with the possibility of renewal within the limits of art. 2 of the Regulations on university research fellowship awarding, which will be subject to a specific contract.

The expected starting date is within the month of November 2023.

The research fellowship amounts to Euro 20,266.98 per year gross to the recipient, net of the expenses to be sustained by the employer. The amount may be subject to adjustment in the event of variations in the law.

2. The research fellowship is awarded for the purpose of collaboration with the following research programme of the ECLT Centre:

- title Web based Decision Support Systems for precision medicine
- scientific disciplinary sector and/or disciplines specifically identified by the call INF/01 Computer Science; ING-INF/05 Data Processing System
- scientific coordinator Prof. Irene Poli
- tutor Prof. Claudio Silvestri
- duration 12 months
- abstract Recent developments in biomedical technology led to the generation of large datasets potentially useful for building personalized treatments based on specific patient characteristics. In this emerging context of precision medicine, computational methods are used to support, based on known data, the choice of optimal personalized treatments, explaining the proposed choices in an understandable way to domain experts. This research uses longitudinal and high-dimensional data about patients from different European countries with kidney disease and type II forms of diabetes and is funded by the European project H2020: Drug combinations for rewriting trajectories of renal pathologies in type II diabetes (see DC-ren, https://dc-ren.eu/), in the area system approaches for the discovery of combinatorial therapies for complex disorders, with duration 2020-2025. The candidate will integrate predictive and classification models into a web interface to make them accessible to users with medical background. Contextual information based on known data will support the presentation of the possible future evolution of the patients' states to help informed decision making by clinicians. In particular, a temporal graph will be used to visually represent the effects of treatment choices and provides information on models and data from other patients to support each indicated transition. The goal is to develop and critically evaluate a new large-scale mechanism to analyze and monitor the origin, development and dissemination of narratives classified as "disinformation", to effectively provide quantitative and qualitative data on the narrative approach to disinformation, including the implementation of narrative methodology. From the results of these studies we expect recommendations for future policy actions and new practices for professionals in the sector.
3. The selection aims to ascertain the scientific-professional requirements deemed necessary to carry out the above research activities.

Art. 2 – Requirements for participation in the selection procedure

1.
